

## Bigfoot Q & A

### IS BIGFOOT DANGEROUS? IS IT MEAN?

Bigfoot almost never displays aggressive behavior, and only one known case has resulted in a death. According to John Green they are harmless. (My personal belief is that we are looking at nothing less than a very primitive human form. -B.A.) One person, though, reported that a group of Bigfoot threw small boulders at his cabin.

### BIGFOOT!!

by Charlie Alexander

One day I was up in the Cascade Mountains. I was walking along a path, when something jumped out of a bush. It was about 10 feet tall. It was hairy and smelly. It chased me for about 100 yards. It chased me up a hill. When I got to the top, there were five Bigfoot. I thought I was Barry Sanders. I maneuvered my way around them and I saw my camp. I ran to get my gun. Then I saw my camp closer. It was all torn up! There was a herd of Bigfoot!! They tossed me around like a doll! One snapped my head, and one twisted my arm. One sat on me. One hit me with a log. One kicked and punched me in the stomach. One hit my back and broke my spine, and one pulled my leg just like I'm pulling yours!
